# THE BEST INGREDIENTS FOR THE BEST FRIENDS

Betaglucan, which plays an important role in supporting the immune system and protecting heart health, is also effective in balancing blood sugar. In addition, it has an anti-inflammatory structure by supporting the bacteria in the intestine.

Omega 6 significantly reduces hair loss, Supports the heart, Helps protect against diseases.

L-Carnitine plays an important role in the fatty acid metabolism. It has an antioxidant activity. It is a component that supports the heart and cardiovascular system and provides easy and fast fat burn.

Arginine has a strength, endurance and performance enhancing effect and plays an important role in growth and development.

MOS

Taurine is an amino acid found in tissues and organs throughout the body that supports brain and heart health and has an extremely important function in retinal and visual functions.

Glucosamine plays an important role in protecting the cartilage structure by having a gel structure that prevents the joint structures from hitting and rubbing against each other.

Whey protein supports fat burning and preserves muscle mass.

Chondroitin helps to restore the health of joint-cartilage tissue.

It is a prebiotic that is effective in maintaining the balance of the microflora of the digestive tract of animals, stimulating the immune system and binding mycotoxins.

Yucca Schidigera

Turmeric Extract

Rosemary Extract

Carob

Micro Algae

Blueberry

Psyllium

Psyllium contains specially processed lignocellulose and psyllium fiber to support digestive system health and prevent the formation of hairballs.

Similar to its benefits for humans, blueberries help prevent cell and tissue damage due to their antioxidant properties. As a good source of fiber and vitamin C, blueberries reduce the risk of urinary tract infections and improve night vision.

While supporting skin and coat health, micro algae is a rich source of essential fatty acids and amino acids that are essential for the heart, nervous and circulatory systems.

Carob is a healthy food source rich in vitamins and minerals and high in fiber. It also positively affects bone health thanks to its high calcium content.

Rosemary extract shows strong antioxidant and anti-inflammatory properties. By eliminating stress induced radicals in the organism, it improves the general health of animals and supports the immune system.

Reported to have anti-inflammatory, arthritis pain relieving, gastrointestinal disorders and anti-allergy effects, turmeric extract is an important nutraceutical food.

Yucca Schidigera helps to reduce fecal odor. Supports the immune system.

Rich in omega 6 fatty acids, chicken fat supports skin and coat health. Helps reduce hair loss.

Rich in omega 3 fatty acids, salmon FAT supports healthy functioning of the eyes, heart and brain. Strengthens immunity.

Egg which is a great protein source, is rich in essential amino acids essential for optimum growth.

Due to the antiseptic substances and antioxidant compounds from the cranberry extract, it promotes the health of the urinary system and strengthens the antioxidant defense mechanism necessary for the organism.

Antarctic Krill is not only a superior source of omega-3, but also a powerful antioxidant with astaxanthin, natural choline and a delicious source of marine protein.

## ABOUT US

As Normpati, we set out on this journey to close the gap in the local pet food production in our country and to break the understanding that “the best food is the most expensive food”. Our aim is to produce delicious and nutritious foods that our four legged friends can consume with pleasure.

Fortunately, day by day, the respect and love for animals, the environment and nature is increasing with the rise in social awareness. With this awareness, we make production by being environmentally sensitive, having high social responsibility and ethical values. We aim to provide the best service by offering quality, innovative and reliable products to the market with our expert colleagues. In line with these values, it is our primary duty to comply with all laws, regulations and rules in the sector we serve. Our aim in this journey that we started in Torbalı, Izmir is to always produce the best quality food for our pets.

### QUALITY - R&D

As Normpati family, we pay attention to the quality of all the foods we produce and check with great care whether they meet our quality standards. The conformity of the analysis results of the incoming raw materials to the desired values and the quality control of the foods we produce are carried out by our expert team in our laboratory, which has the latest technology devices. The detailed control of every process from the product entering our factory to the final product supplied to the consumer is part of our food safety management system, which is recognized in accordance with international standards.

The foods we produce are formulated with the highest quality and nutrient digestible raw materials to meet the nutritional needs of our pets. More than a hundred of our rations with special ingredients are created in accordance with FEDIAF guidelines. These special ingredient rations are verified through R&D studies and are constantly updated according to evolving needs.

### RAW MATERIAL SUPPLY

The supply of quality raw materials, which is of great importance for the nutritional value of our foods, is the responsibility of our experienced team. All raw materials we use in our foods are selected for a complete and balanced nutrition of our pets.

As the quality and continuity of the raw materials used in formula production is of great importance, the criteria specific to the raw materials are known by our expert team and tested in our state-of-the-art laboratory. In addition to the raw materials in our existing laboratory, research on alternative raw material sources is ongoing. Thus, our four legged friends are always supported to be fed at a high level. Our aim is to keep the continuity of nutritious foods under control at all times while maintaining the most affordable costs.

### PRODUCTION

Our formulas with more than a hundred special ingredients for our pets are produced with the state-of-the-art “Twin Screw Extrusion” system. Customized for pet food, this system supports the production of nutritionally balanced foods that are also attractive to pet owners. With the advanced automation system, perfect process control is achieved through the operation of the systems.
